Plot Bids

Allocation of plots based on bids:

1. The application handler decrypts the plot bids in the electronic application service.
2. The electronic application service verifies the bids and orders of priority for each plot.
3. The highest bid for the plot wins.
   - If the applicant who submitted the winning bid has already received a plot according to their order of priority, the next highest bid will be considered, and so on.
   - If there are two or more winning bids for the plot, the winner will be chosen by a draw.
4. The electronic application service makes a decision proposal of the plot recipients.
